DETAILED ACTION

Election/Restrictions

The request to review the restriction requirement will be made upon the determination of allowable subject matter. The argument by applicants' that the developer in independent claim 15 is "essentially" the same, as the definition of claim 1 is not convincing. The developing agent of claim 1 is used in combination with another developing agent. Such use does not define the black developing agent and has little patentable weight. The apparatus of claim 15 has both a color developing agent and a black developing agent.

Claim Rejections - 35 USC § 102(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

1. Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by 20040048182 Urabe.

The applied reference has a common inventor with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kido et al [6541173] in view of Kurose et al [5879848] and Yamashita et al [20030165765] Kido et al teaches the developing agent having two release agents with two different softening points that prevents offset phenomenon in the developing of electrostatic images note Col 7 lines 20-60. The use of two binder resins both linear and non-linear polyesters would have different physical properties such as flow starting temperatures and softening points. Kurose teaches the toner with two binder resins having different flow temperatures and softening points. Note Col 3 lines 5-35 teaching both black and colored toner particles. Acid values in binder resins are taught in Col. 4 lines 40-55. High acid values are effective for obtaining satisfactory fixing properties. Low acid values are effective for obtaining good storage capability. Yamashita et al teaches the carrier with a silicon coating note [0054], [0059], [0064] and [0065] in relation to applicants claims 6, 7, 13 and 14. It would be obvious to one of ordinary skill in the art at the time of applicants' invention with a reasonable expectation of success to use a resin combination having different acid values and two release agents in a toner composition to improve the physical properties of the composition in a developer that is heat fixed.
